

Flow Monitor

DUM

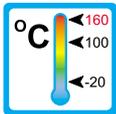

Operation

The flow monitors type DUM operate with the float measuring principle

Application

The flow monitors type DUM are used for monitoring volumeflow of liquid media.

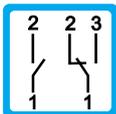

Areas of application:

– Mechanical Engineering e.g. Weldingmachinery and Laserplants

– Medicine technology

– Chemical industry

– Research and development

Features

The DUM series proves itself through reliable function and easy handling. Further characteristics of this sturdy type are:

- universal orientation
- high reliability
- high switch accuracy
- wide switch range
- infinitely variable switchpoint adjustment through user
- EX-version to ATEX available
- high pressure resistance
- Threaded connection
Special threads on request

Installation hints

The installation of the flow monitor can be done in any way in the system. The flow direction must be observed.

The flow monitor must not be used as a supporting part in a pipeconstruction!

The medium must not contain any solid particles! We recommend the installation of strainers type SFD or SFM.

External magnetic fields influence the switch contact. Keep adequate distance to those magnetic fields (e.g. electromotors)!

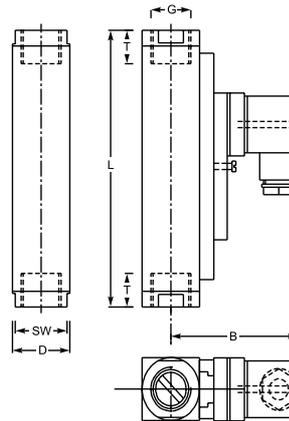

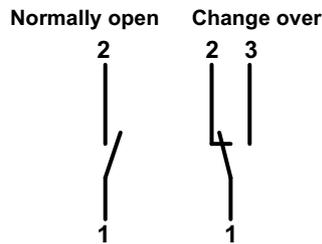

The operating instruction for DUM must be observed under any circumstances!
