

High Speed LABEL•EYE Set-Up Instructions

High Speed LABEL•EYE (10 microseconds)

AUTOSET

Similar to the Standard Label Eye in setup, simply put the gap in view and push and hold the AUTOSET button for 1 second. The AUTOSET LED will remain on when the setup is complete. If the setup is not adequate, the AUTOSET and Output LEDs will flash 3 times. This may indicate a backing material that is too dense to penetrate.

UP/DN Adjustments

The High Speed Label Eye has the ability to "tweak" the setup incrementally. Simply momentarily tap the AUTOSET (UP△) button, or LT/DK (DN▽) button to adjust the sensor to a more stable and repeatable setting. This feature is used when the AUTOSET does not provide the optimum setting initially.

Example: If the label backing material is inconsistent, or the label material has more translucent areas coming into view, then the sensor may need to be adjusted slightly for this rare occasion.

Having the ability to fine tune the sensor for changing conditions provides a solution that is easy to implement and simple to understand.

Light/Dark

Push the LT/DK button to change output from Dark On to Light On...output turns on when label in view, or output turns on when gap in view.

SPECIFICATIONS

SUPPLY VOLTAGE

- 10 to 30 VDC
- Polarity Protected / Transient Voltage Protected
- Intended for use in class two circuits

CURRENT REQUIREMENTS

- 45 milliamps (exclusive of load)

OUTPUT TRANSISTORS

- (1) NPN and (1) PNP output transistors
- Sensor outputs can sink or source up to 150 milliamps (current limit)
- All outputs are continuously short circuit protected

REMOTE AUTOSET INPUT

- opto isolated momentary sinking input (10 milliamps)
- Note: Remote models only*

RESPONSE TIME

- Light/Dark state response = 10 microseconds

LED LIGHT SOURCE

- High intensity red LED
- Pulse modulated

PUSH BUTTON CONTROL

- Automatic set-up routines based on web opacity
- AUTOSET - One button push setup
- LT/DK - Change output from Label to Gap

HYSTERESIS

- Minimal hysteresis promotes the detection between the backing material and the label depending on the settings

LIGHT IMMUNITY

- Responds to sensor's pulsed modulated light source ... immune to most ambient light

INDICATORS

- Green LED flashes when AUTOSET routine is activated and stays illuminated when AUTOSET is completed
- Red LED illuminates when sensors output transistors are "ON".

Note: The status of the output transistors can be inverted by pushing the LT/DK button.

AMBIENT TEMPERATURE

- -40°C to 70°C (-40°F to 158°F)

RUGGED CONSTRUCTION

- Chemical resistance to harsh cleaners such as detergents, alcohols, and ketones
- Waterproof, ratings: NEMA 2
- Conforms to heavy industry grade CE requirements

RoHS Compliant
Product subject to change without notice.

Model Numbers:

High-Speed

Label•Eye

Description	
LERC10	Red LED, 4-pin M8 Connector
LERR10	Red LED, 5 Conductor, 6 ft. Cable
LERRC10-M12	Red LED, 5-Pin, M12 Connector

Nano Cable (M8) Selection Guide

P/N	Length	Thread Coupling
GEC-6	6 ft. (1.8m)	Straight Female
GEC-15	15 ft. (4.6m)	Straight Female
RGEC-6	6 ft. (1.8m)	90° Female
RGEC-15	15 ft. (4.6m)	90° Female

DIMENSIONS

Label Eye Wiring (Remote Set)

Label Eye Wiring (Standard)
