TU

COMPACT LOAD CELL FOR TENSION/COMPRESSION APPLICATIONS

Main features

- Range of measurement: from 50 to 1000 kg
- Accuracy class: 0,2%
- · All stainless steel construction
- · Corrosion resistant
- Grade of protection: IP67 (norme DIN 40050)
- · Compact size

The TU range of load cells are designed for the measurement of static or dynamic loads in compression (output signal: negative) or traction (output signal: positive). All the transducers are calibrated as load cells in units of mass (Kg). The TU series is supplied for nominal loads from 50Kg to 1t.

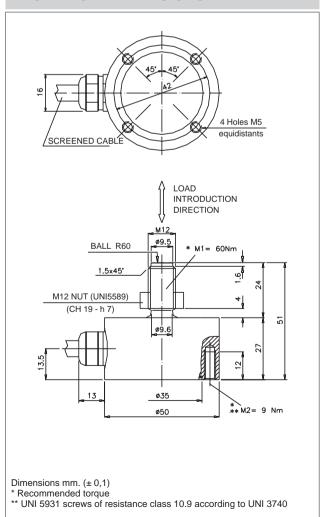

This model has an IP67 protection degree so it can be used in aggressive atmospheres often found in the chemical industries. The transducer body is machined from a single piece of stainless steel with no welding. This means that it is highly resistant to mechanical shock and vibration.

The compact size means that these cells can be placed in positions that are difficult to acess and where little space is available.

ELECTRICAL CONNECTIONS

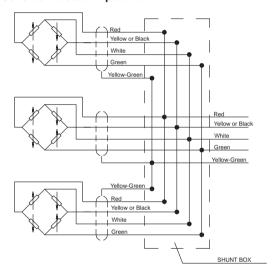

4x0.25 Screened cable

* The screen is isolated from the transducer body. It is recommended that the ground is connected at the instrument end

Cells connected in parallel

In systems that use several cells, the parallel connection automatically sums the loads on each individual cell.

Using this method of measurement, the maximum load will be the sum of the loads on the individual cells and the sensitivity will be the average value of these cells. It is important that the user ensures that no cell is stessed beyond its maximum rating under any load condition.
